

GET THE FACTS ON GREENS ROLLING...

Years of research gives you proven facts about greens rolling and explains the benefits of regular rolling practices.

University Research Proves True-Surface Vibratory Greens Rollers will Vibrate 45% MORE TOPDRESSING INTO THE CANOPY!

The True-Surface® Vibe V has a patented, adjustable vibratory action that will vibrate 45% more topdressing into the turfgrass canopy than just brooming alone.

US Patent No 5,261,213
World Patents Passed and Pending

*By incorporating more topdressing sand into the canopy, you have **LESS ORGANIC MATTER** build-up in the putting surface. Less organic matter results in **GREATER GREEN SPEED.***

"The Vibe V has allowed me to provide more consistent green speeds while working sand into the canopy. I can also smooth the green surface after aerification ..."

*~ Sam Mueller, Vasari Country Club
Bonita Springs, FL*

Greens Rolling Facts:

- Rolling 3x per week will **INCREASE TURFGRASS HEALTH** and provide greater root density, which produces better greens and more satisfied golfers.
- Rolling 3x per week will **INCREASE GREEN SPEED**. Raise your height of cut, improve turfgrass health, and increase golfers' satisfaction.
- Rolling 3x per week will **IMPROVE TURFGRASS HEALTH** by decreasing dollar spot and localized dry spot. Healthy greens... more satisfied golfers.

CONSISTENT, SMOOTH, HEALTHY...

The greens you want created by True-Surface®!

KEEP YOUR GREENS HEALTHY WITH TRUE-SURFACE®

"We use True-Surface® Vibratory Rollers to prepare seedbeds for greens using a step-by-step process:

- 1. Rake seedbeds by hand*
- 2. Water seedbeds and allow time for water to evaporate*
- 3. Roll seedbeds in two, perpendicular directions using the vibratory rollers*
- 4. After dark, illuminate the greens with headlights to find any darker, low areas*
- 5. Mark the darker, low areas with turf paint*
- 6. The next day, repeat the above steps, concentrating on the low areas, until the seedbed is extremely smooth*
- 7. The green is now ready for seeding*
- 8. Allow grass to germinate and grow to about $\frac{3}{4}$ inch tall*
- 9. Roll the green in three directions using the vibratory rollers*
- 10. Beginning at a height of $\frac{1}{4}$ inch, mow the green, taking the height down as quickly as possible and making sure not to scalp any areas*
- 11. The green is ready*

By having the area prepared and very smooth before we seed, it takes much less topdressing and we can get the height of cut down much quicker, which makes the grass denser in a shorter period of time."

*~ David Livingston, Facility Manager of Joseph Valentine Turfgrass Research Center
Pennsylvania State University*

Your golfers want and demand smooth, consistent greens. They need putting conditions to remain the same as they move from green to green. However, you need your greens to stay healthy. Only the True-Surface Vibratory Greens Rolling System will provide consistent ball roll distance throughout all your greens, while still keeping them healthy. The patented Select-A-Vibe dial allows you to adjust your vibration level according to your specific green.
