

TRUE-SURFACE® VIBRATORY GREENS ROLLERS

ROLLING IN THE MONEY

Superintendents everywhere are cutting costs and

True-Surface® Vibratory Greens Rollers Will Save Your Course Money...

Alternating triplex mowing and lightweight rolling can save:

\$5,000
ANNUALLY

Alternating walk behind mowing and lightweight rolling can save:

\$14,000
ANNUALLY

See what your course can save! Visit www.true-surface.com to determine your course's ROI for a True-Surface® Roller!

Requests for a True-Surface® walkbehind unit have been overwhelming. Therefore, Turfline has created the True-Surface® Trekker™.

United States & World Patents Passed & Pending

ROI IN 15 MONTHS

Save on Chemical Costs!

Rolling your greens reduces dollar spot, localized dry spot, moss occurrence, & broadleaf weeds. Greens rolling provides greater root density and healthier turf, resulting in less chemical expense.

Save on Labor Costs!

By incorporating vibratory rolling into your greens maintenance program, you will be able to reduce the amount of days you mow your greens. Reducing your mowing frequency, by alternating mowing and rolling instead of mowing everyday and rolling 3 times a week, will significantly save on labor costs.

Create Course Revenue!

The use of True-Surface® Vibratory Greens Rollers will help create healthy greens with consistent speeds. By rolling more and mowing less, you leave more plant material for photosynthesis. Rolling will also allow you to raise your mowing HOC by 25%. Golfers will experience the consistency from green to green.

TRUE-SURFACE® 
... makes true greens!™

WHY SHOULD YOU USE TRUE-SURFACE® VIBRATORY GREENS ROLLERS?

VIBRATORY ROLLERS

See the benefits of choosing True-Surface®

*Vibratory
Action*

Vibration sets True-Surface® apart from other lightweight greens rollers. True-Surface® Vibratory Greens Rollers are the only rollers in the world with the patented True-Surface® vibratory technology.

To understand how vibratory rollers work, take a handful of sand and place it in a mound in the middle of a tea tray. Now, imagine that mound represents a bump in your greens that you want to smooth out. How do you smooth it out?

You can either press it down with the palm of your hand; representing how a non-vibratory roller works - or you could gently shake the tea tray and watch it settle out level. True-Surface® Vibratory Greens Rollers work like the vibrating tea tray; it gently and effectively produces high frequency, minimal weight vibrations to disperse topdressing evenly.

TRUE-SURFACE® ALLOWS YOU TO VIBRATE IN TOPDRESSING

Vibrate 45% more topdressing into the turf canopy using True-Surface® Vibratory Greens Rollers instead of just brooming alone. True-Surface® offers an alternative to standard dispersion practices.

Its unique vibration methods energize the turf by sending light vibrations through the greens, allowing them to vibrate the sand into the turf canopy and ensure deeper penetration into the root zone.

By using True-Surface® Vibratory Greens Rollers to work in your topdressing, you are promoting healthier greens. The more topdressing you incorporate into the canopy, the less organic matter you have; leaving you with healthier greens and faster green speeds.
