

# True-Surface® Vibe Y™ Vibratory Greens Rollers

Find out more!

## Self-Contained Non-Vibratory Greens Rollers

**True-Surface®  
Greens Rollers**

**VS.**

**Self-Contained  
Greens Rollers**

**Rolling Width = 60"**

**Rolling Width = 48" & Less**

**3 Vibratory Rollers - 85 lbs each**

**720 lbs & Less**

**True-Surface® is the definition of lightweight greens rolling!**

### Multi-Purpose Unit:

- ✓ **Greens Rolling**
- ✓ **Light Topdressing Incorporation**
- ✓ **Grow-in of New Greens**
- ✓ **Helps with Bridging  
In Aeration Holes**

### Single-Purpose Unit:

- ✓ **Greens Rolling**

**TRUE-SURFACE®**   
... makes true greens!™

### **EASE OF OPERATION**

Greensmowers are **EASY AND NATURAL** for operators of all skill levels, as they are forward facing. You can train with the True-Surface® greens rollers before sending trainees out to mow your greens. Rolls 60” per pass. True-Surface® stripes just like your greensmower.

Steering is a challenge, and some operators are much slower than others. Only extensively trained employees are allowed to operate the roller. Using a side-to-side motion can cause discomfort for the driver. Rolls 48” or less per pass on the green - no straight striping.

### **GREEN SPEED INCREASE**

Only True-Surface can provide consistency of 2” to 4” on all greens. Side by side comparisons of True-Surface® and self-contained units result in **EQUAL OR BETTER** ball roll distance for True-Surface®. Using the Select-A-Vibe™ makes green speed consistency easy to achieve.

Bigger isn’t always better. A heavier/bulkier unit doesn’t produce a truer green surface. The Sport Turf Research Institute (STRI), funded by the R & A, used the True-Surface® rollers to develop their Greens Trueness Meter™.

### **CUSTOM ROLLING**

Everyone knows that no 2 greens are alike. The Select-A-Vibe™ Dial allows you to select 1 of 5 settings, customized rolling tailored to **YOUR** greens. Each setting increases True-Surface® energy by 20%. **NO OTHER ROLLER CAN COMPARE!**

No customization available. There is one fixed weight for all your greens. The only variable is the weight of the operator. Additionally, you will always double roll the greens outer edge (collar) as a result of sideways steering.

### **TRACTION ON SLOPES**

No problems! Greensmowers are made for greens! With the ability to raise the rollers with each turn, collar damage is **NEVER** an issue.

Spin out is a problem and damages the turf. Collar damage is a major concern as noted by academia studies.

### **EASE OF TRANSPORT**

Triplex greensmowers are driven from green to green. The operator **NEVER** has to get out of the seat, saving time and money in a budget crunched economy.

Most need a trailer AND a utility vehicle to move from green to green. The operator has to get off and on at least **72 TIMES** while rolling 18 greens - not a practical use of labor

### **OPERATOR SAFETY**

Triplex greensmowers are not considered unsafe.

**SAFETY** is definitely a concern - as reported by users.
